

## Getting to know Okta

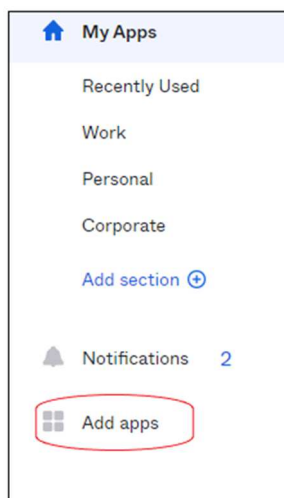

Okta is a cloud platform that provides single sign-on for Magellan applications that employees use to communicate and collaborate such as MagellanNOW and Zoom, in addition to HR systems such as Workday, VERN and our learning management system, Saba.

### Okta's Home Page

Okta's home page will look similar to the below image. Using and Navigating Okta is easy and user friendly. Okta applications are arranged in the familiar grid-style layout with large, clickable web buttons to launch apps. When a new application has been assigned, Okta will alert you in the Notifications. Other alerts and system notifications will also appear here.

### Add Applications in Okta

Okta has thousands of applications available with more being added daily. Your account will be pre-populated with some standard Magellan applications. Clicking the add apps functions allows to you to browse Okta's collection and select additional apps to be added to your main page.

*Note: Depending on your employment type, you may not have or have access to all standard applications*
